

KING'S COLLEGE

WILKES-BARRE, PENNSYLVANIA

Computer Science

It's a Thursday night and you've just finished your chemistry term paper. With the touch of the saved command on your keyboard, you've just freed up your entire weekend. And then it happens. Just as you're about to save your file, your computer screen turns black and one of the most dreaded messages known to computers users everywhere appears: unknown system error. And just as quickly as that message appeared, your term paper disappears—along with all of your weekend plans. But wait. Don't cancel those plans yet. Maybe, just maybe, your brother, the computer science major, can rescue that chem paper along with your big plans.

Computer Science at King's

While computer science majors can help you recover lost documents on your computer, their skill set encompasses a much broader and deeper domain of technological capabilities.

"The world of computer science is very vast," explains Paul Moran, chairperson of the computer science department. "As the name of the major suggests, students who study computer science utilize the scientific method to find solutions to problems using computer technology. While many of those solutions are arrived at to help businesses function efficiently, computer scientists also assist people working in numerous other fields."

Career Opportunities

Students who major in computer science have multiple career paths and jobs to pursue. Read on for a few examples of what this degree can do for you.

- Information technology specialists who set up and run computer and network systems
- Computer and information systems analysts who manage databases and organize information
- Computer scientists who develop algorithms to solve the problems involved in networking and write the programs to implement them
- Computer engineers who develop the hardware which is required to run systems

Job and Graduate School Placement

Many people who have earned a degree in computer science from King's have flourished in the workforce and in graduate school. Listed below are just a few of the places where our alumni have found success:

- Blue Cross of Northeast PA, programmer analyst
- Benco Dental, tech support specialist
- Gunnison Software, VBNet developer
- Krols, cyberforensics
- Thomas Education Direct, web developer
- Intellacom, Inc., network engineer
- The George Washington University, graduate studies
