

KING'S COLLEGE

WILKES-BARRE, PENNSYLVANIA

Environmental Program

When you heard about Hurricane Katrina and the Gulf Oil Crisis was your first thought about the environment and the impact these catastrophic events would have on it? Whether it is helping to save wildlife, finding new power sources or changing the laws—the world is in need of people who understand and care about environmental issues and will work to improve the ways we use energy and natural resources.

What Makes Us Different

At King's, we teach our students not only how to examine environmental problems from a scientific approach but also from social, economic, and ethical perspectives. By doing this, our students gain a better understanding of how environmental problems not only impact ecological systems but how they also have a ripple affect on human society.

Program Structure

King's environmental program is comprised of two different majors—environmental studies and environmental science. The environmental studies program analyzes environmental changes that may affect the well being of our world, whereas the environmental science program focuses on the intensely scientific aspects of protecting and conserving all aspects of our environment.

Hands-On Learning

When it comes to studying the environment, there is no better way to understand it than through hands-on research. A large percentage of our students time is spent working side-by-side with their professors utilizing the latest technology to conduct research projects in the laboratory or in field settings. Sample research projects include erosion control studies and water quality and fishery surveys of local lakes and streams.

Careers

A degree in environmental studies is designed to prepare students for careers in environmental management, business,

advocacy, policy and law. Environmental science prepares you for a career in research and technology, resource management or conservation.

Placement Highlights

Listed below are just a few examples of where our graduates have found success:

- Pace University Law School, environmental law program
- Ecology III Inc., environmental specialist
- Michigan State University, quantitative ecology program, Ph.D. candidate
- Ecoscientific Solutions LLC, environmental technician
